1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over GB 2,041,028 to Gott in view of Garick, U.S. Patent No. 3,758,329. Gott discloses a nonwoven fabric comprising a plurality of strands which are coated with an adhesive on one side as well as the method of making the fabric comprising providing the parallel fibers which are oriented in the warp direction, and applying a predetermined quantity of melted adhesive to the fibers, see col. 1, lines 1-62. Gott differs from the claimed invention because Gott does not disclose employing glass or metallic fibers in the fabric and because Gott does not disclose the claimed thickness of the coating or the amount of the coating employed. With regard to the amount of coating and the thickness, it would have been obvious to one of ordinary skill in the art to have selected the thickness and the amount of adhesive coating employed through the process of routine experimentation since the amount of adhesive would be directly related to the strength of the fabric as a whole. With regard to the use of other types of fibers, Garick discloses that strands of other materials such as parallel strands of glass, metal or synthetic resin filaments can be coated on one side with a heat softenable material which corresponds to the claimed adhesive material. See col. 2, line 67 – col. 3, line 10. Therefore, it would have been obvious to have employed the other types of fibers disclosed by Garick as the fibers to be formed into the fabric of Gott. One of ordinary skill in the art

Art Unit: 1771

would have been motivated to use other types of fibers because Garick teaches that such fibers are useful and further, it would have been obvious because the different types of fibers would have been useful for imparting properties such as strength, conductivity, etc to the finished product of Gott.
